

Move to the directory or folder on Windows File Explorer which you want to keep track of. Here, I want to keep track of my files and folders of Documents folder. Copy the path of that directory.

Now, open any web browser of your choice and paste the copied path

[Verzenden](#)[Bewaren](#)

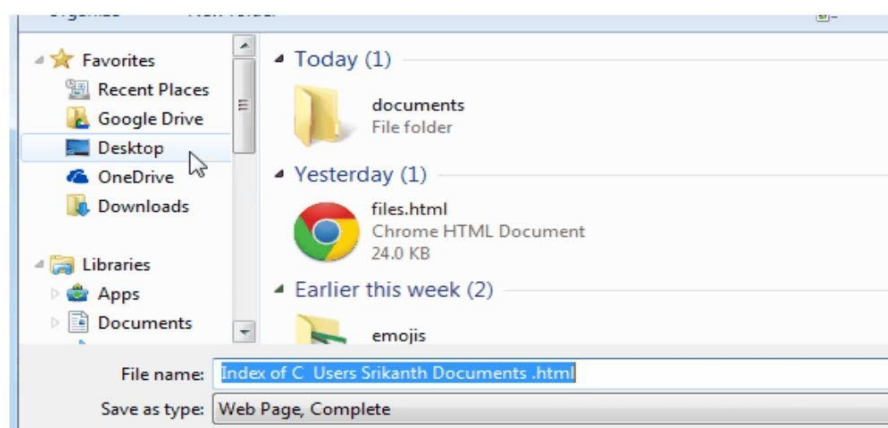

file:///C:/Users/Srikanth/Documents/

Index of C:\Users\Srikanth\Documents\

Name	Size	Date Modified
[parent directory]		
Add-in Express/		06/12/2012 23:18:01
AirDroid/		06/12/2014 01:27:12

It shows you the yellow boxes with arrows and it will allow you to select the required frame. You can find here that I selected the part I want.

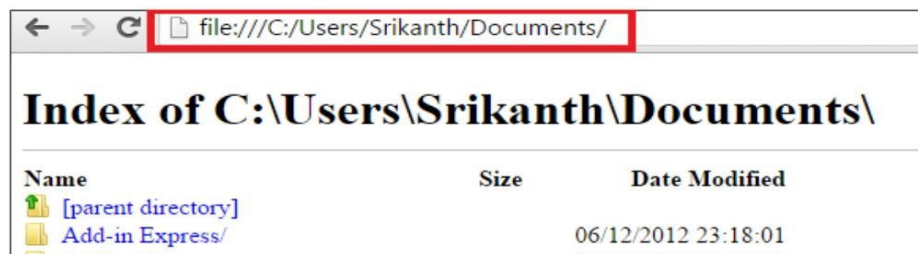

Once done with these steps, now click on **import** button and you see that all the files and folders details are imported to your Excel sheet in no time. You can see that, data is shown the columns and gives us the clear idea of every detail.

Now, via Windows Explorer go the location you saved the offline webpage and copy the path. The, open the Excel sheet and tap on the **Data** tab and click on **From Web**. It opens up the Window and in the Address bar paste the copied path and click “Go” button. It will load all the contents of the webpage.

It shows you the yellow boxes with arrows and it will allow you to select the required frame. You can find here that I selected the part I want.

Once done with these steps, now click on **import** button and you see that all the files and folders details are imported to your Excel sheet in no time. You can see that, data is shown the columns and gives us the
